

over the last decade, industrial real estate in the Midwest has undergone significant transformation. Cities like Chicago, Indianapolis, and Columbus have become logistics and distribution hubs due to their central location and access to major highways. Demand for warehouses, distribution centers, and last-mile facilities has surged, driven by the e-commerce boom and evolving supply chain strategies. Vacancy rates have declined steadily while rental rates have seen consistent growth. Investors and developers have focused on upgrading infrastructure and sustainability features to meet tenant demands. Secondary markets have also seen increased activity as supply tightens in core markets.
